EDITOR'S INTRODUCTION TO INTRACEREBRAL HEMORRHAGE: TREATMENT OPTIONS AND OUTCOME

Neurosurgical Focus Volume 1, Issue 4

Topic Editor: Julian T. Hoff, M.D., Section of Neurosurgery, University of Michigan, Ann Arbor, Michigan

Dear Reader:

The papers in this month's edition of **Neurosurgical Focus** concern intracerebral hemorrhage, a common problem for all neurosurgeons. Intracerebral hemorrhage from a variety of sources continues to be a major cause of morbidity and mortality in our patients. The following studies focus on pathophysiological events following hemorrhage, produced in laboratory animals as well as clinical situations that still defy specific answers for the intracerebral hemorrhage problem. I hope you enjoy reading these three papers.
