

## ERRATUM

**Magnetic resonance–guided focused ultrasound thalamotomy for essential tremor: a 5-year single-center experience**

TO THE READERSHIP: An error appeared in the article by Sinai et al. (Sinai A, Nassar M, Eran A, et al. Magnetic resonance–guided focused ultrasound thalamotomy for essential tremor: a 5-year single-center experience [published online July 5, 2019]. *J Neurosurg*. doi:10.3171/2019.3.JNS19466).

In the *Assessments* section of the *Methods*, the Clinical Rating Scale for Tremor (CRST) was incorrectly stated as ranging from “0–152 points.” The correct range for the CRST score is 0–160 points. The updated sentence appears below.

Tremor was assessed using the Clinical Rating Scale for Tremor (CRST) score (ranging from 0–160 points, higher scores indicating greater disability).

The article has been corrected online as of February 14, 2020.
