

ERRATUM

Screening duplex ultrasonography in neurosurgery patients does not correlate with a reduction in pulmonary embolism rate or decreased mortality

TO THE READERSHIP: An error appeared in the article by Dickerson et al. (Dickerson JC, Harriel KL, Dambrino RJ IV, et al: Screening duplex ultrasonography in neurosurgery patients does not correlate with a reduction in pulmonary embolism rate or decreased mortality. *J Neurosurg* [epub ahead of print April 26, 2019; DOI: 10.3171/2018.12.JNS182800]).

A clarification is needed in the first sentence of the *Results* section. The phrase “Of the 2532 reviewed patients” should be “Of the 2532 reviewed admissions.” The corrected sentence appears below.

Of the 2532 reviewed admissions, 485 met criteria for the routine-LEDUS group and 504 for the selective-LEDUS group.

The article has been corrected online as of October 25, 2019.

Chad W. Washington, MS, MD, MPHS
University of Mississippi Medical Center, Jackson, MS
