DISCLAIMER  The Journal of Neurosurgery acknowledges that the following section is published verbatim as submitted by the authors and did not go through either the Journal’s peer-review or editing process.
Supplemental Figure 1 - The difference of PDI between groups presented with long-term or short-term follow-up. Error bar is standard error. S-ICA-S means short-term follow-up of surgical-ICA; S-ICA-L means long-term follow-up of surgical-ICA; C-ICA-S means short-term follow-up of Contra-ICA; C-ICA-L means long-term follow-up of contra-ICA.
Supplemental Figure 2 - Changes in mean wall shear stress vs pressure drop after surgery. A greater decrease in pressure drop post-operation corresponded to increases in mean WSS (R² = 0.23, P = 0.02).
